

19th VistA Community Meeting
Bethesda, Maryland, USA
June 18, 2009

**Interoperable Health Information:
How Can NLM Help?**
How Can You Help NLM?

Betsy L. Humphreys
Deputy Director
National Library of Medicine
National Institutes of Health
Department of Health and Human Services

Four Broad Goals

- ◆ **Seamless, Uninterrupted Access** to expanding collections of biomedical data, medical knowledge, and health information
- ◆ **Trusted Information Services** that promote health literacy, improve health outcomes, and reduce health disparities worldwide
- ◆ **Integrated Biomedical, Clinical, and Public Health Information Systems** that promote scientific discovery and speed transition of research into practice
- ◆ **A Strong and Diverse Workforce** for biomedical informatics research, systems development, and innovative service delivery

Some specifics relevant to EHRs & VistA

- ◆ Continue/enhance standards work in response to **U.S. government priorities** and **feedback from “real” use** in EHRs
- ◆ Promote development of “Next Generation” EHRs (and PHRs) NLM Track Fri. 11:30 am, 2:15 pm
- ◆ Promote use of advanced representations of biomedical knowledge in conjunction with EHRs

ARRA Title XIII – HITECH Act - Feb. 2009

- Incorporates text from previously circulated Health IT bills
- Establishes Office of the National Coordinator of Health IT (ONC) and 2 new Federal Advisory Committees
 - HIT Policy Committee & HIT Standards Committee
- Allocates \$2B to ONC to support various activities to promote interoperable health IT
- Modifies HIPAA Privacy and Security provisions
- Has many regulatory and reporting requirements
- Title IV: Allocates additional \$17+B to be spent via CMS, states
 - Differential reimbursement for “meaningful use” of electronic health records for care of Medicare/Medicaid patients

ARRA HITECH & U.S. Government Priorities

Health Information Technology *and* For the Future of Health [^] Care

Health Information Technology

Health information technology (Health IT) allows comprehensive management of medical information and its secure exchange between health care consumers and providers. Broad use of health IT will:

- Improve health care quality
- Prevent medical errors
- Reduce health care costs
- Increase administrative efficiencies
- Decrease paperwork
- Expand access to affordable care

Interoperable health IT will improve individual patient care. It will also bring many public health benefits including:

- Early detection of infectious disease outbreaks around the country
- Improved tracking of chronic disease management
- Evaluation of health care based on value enabled by the collection of de-identified price and quality information that can be compared.

Draft “Meaningful Use” definition released June 16

- ◆ Health Outcomes Policy Priorities
 - Care Goals
 - Objectives (2011, 2013, 2015)
 - Measures (2011, 2013, 2015)
- ◆ Comments due by June 26, 2009
 - No more than 1,000 words 😊

Draft “Meaningful Use” definition released June 16

◆ Health Outcomes Policy Priorities

- Improve quality, safety, efficiency, and reduce health disparities
- Engage patients and families
- Improve care coordination
- Improve population and public health
- Ensure adequate privacy and security protections for personal health information

Draft “Meaningful Use” definition — Example

- ◆ **Priority:** Improve quality, safety, efficiency, and reduce health disparities
 - **Care Goal (1 of 5):** Provide access to comprehensive patient health data for patient’s health care team
 - **2011 Objective (1 of 12):** Maintain an up-to-date problem list
 - **2011 Measure (1 of 12+):** Report % of hypertensive patients with BP under control

Draft “Meaningful Use” definition — Example

- ◆ **Priority:** Engage patients & families
 - **Care Goal:** Provide patients & families with access to data, knowledge & tools to make informed decisions, manage health
 - **2011 Objective (1 of 3):** Provide access to patient-specific educational resources
 - **2011 Measure (1 of 3):** % of patients with access to patient-specific educational resources

Draft “**Meaningful use**” Care Goals– Success likely to require: (1) some content standardization, (2) links to external information

- Provide access to comprehensive patient health data for patient’s health care team
- Use evidence-based order sets & CPOE
- Apply clinical decision support at the point of care
- Generate lists of patients who need care and use them to reach out to patients
- Report to patient registries for quality improvement, public reporting, etc.
- Provide patients & families with access to data, knowledge, & tools
- Exchange meaningful clinical information among professional health care team
- Communicate with public health agencies

Health Information Technology and Health Data Standards at NLM

[Printer-friendly Version](#)

NLM is the central coordinating body for clinical terminology standards within the Department of Health and Human Services (HHS). NLM works closely with the Office of the National Coordinator for Health Information Technology (ONC) to ensure NLM's efforts are aligned with the goal of the President and HHS Secretary for the nationwide implementation of an interoperable health information technology infrastructure to improve the quality and efficiency of health care.

Health Data Standards

04/06/09 [Owners of LOINC, NPU, and SNOMED CT Begin Trial of Cooperative Terminology Development](#)
 04/04/09 [IHTSDO and HL7 Sign Agreement](#)

NLM supports the development, enhancement, and distribution of clinically specific vocabularies to facilitate the exchange of clinical data and improve retrieval of health information.

- Clinical Vocabularies supported, licensed, or developed by NLM:
[SNOMED CT](#) | [LOINC](#) | [RxNorm](#)
- Uniform distribution mechanism for HIPAA and clinical vocabulary standards through the [UMLS Metathesaurus](#)
- [UMLS Enhanced VA/KP Problem List Subset of SNOMED](#)

NLM distributes FDA approved Structured Product Labels linked to RxNorm and related medication information:

- [DailyMed](#)

NLM coordinates efforts to develop [mappings](#) between HIPAA code sets and standard clinical vocabularies.

Content Standards: NLM's primary focus is *terminology...*

- ◆ Data elements, e.g., gender, presenting complaint)
- ◆ Descriptions of entities, e.g., birth certificate
- ◆ Messages, e.g., send test result
- ◆ Allowable values for data elements, which can be entire **vocabularies**
- ◆ Reference values, i.e., what is “normal”?
- ◆ **Mapping/alignment** between different vocabularies and with message standards
- ◆ **Information models** that define the context in which standards are used
- ◆ Survey questions and any coded responses
- ◆ Guideline, protocol, and algorithm formats

UMLS Metathesaurus (Apr 2009)

~2,215,395 concepts (distinct meanings)

~8,006,171 unique concept names (some are minor variations)

From 152 vocabulary sources (e.g., SNOMED CT, ICD-9-CM, Gene Ontology)

In 19 different languages (all concepts have English names; some have names in other languages)

Associated resources: UMLS Semantic Network, MetaMorphoSys Customization tool, Browser, Lexical tools, Mapping software, etc.

Clinical Terminology Standards

supported, licensed, or developed by NLM

- ◆ **SNOMED CT** * (Systematized Nomenclature of Medicine – Clinical Terms) NLM Track – Fri. 10:45 am
 - Broad clinical coverage: diseases, findings, anatomy, organisms, etc.
- ◆ **LOINC*** (Logical Observation Identifiers, Names, Codes) NLM Track – Fri. 9:45 am
 - Specific tests, measurements, assessment instruments
- ◆ **RxNorm*** NLM Track – Fri. 9:00 am
 - Clinical drugs (ingredient + strength + dose form) linked to ingredients, brand names, names used by VA, commercial drug knowledge bases, NDCs, etc.

(**RxTerms** – entry vocabulary tailored for rapid data entry by US users) NLM Track – Thurs. 3:45 pm

*U.S. designated standard (CHI > HITSP > ARRA-HITECH)

Welcome to IHTSDO

IHTSDO is a not-for-profit association that develops and promotes use of SNOMED CT to support safe and effective health information exchange. SNOMED CT is a clinical terminology and is considered to be the most comprehensive, multilingual healthcare terminology in the world.

Some NLM Assumptions

- ◆ Standardizing *some* data elements during initial data capture will be cost-effective
- ◆ Standardization can occur “under the hood” in clinical information systems
- ◆ You don’t need to choose between standard vocabulary and accurate patient data
- ◆ We need to use and perfect the standard terminologies we already have – *not create new ones*
- ◆ BUT – It all needs to be *EASIER!!*

Recent (9/2008-5/2009) NLM Board of Regents Review of NLM Health Data Standards Activities

- ◆ Among other recommendations:
 - Provide additional tools and services to help users incorporate standards where they will have a positive impact - NOW
 - Establish tight feedback/improvement loop with a set of clinical system users **
 - Promote & enable collaboration in development of terminology value sets and useful clinical subsets

** This conference is a golden opportunity ☺

NLM can help -

- ◆ Determine if concepts and terms are *already* present in standard terminologies
 - term look-up, batch lists, extraction from clinical texts
- ◆ Map local vocabularies to standard terminologies
- ◆ Add missing concepts and terms to standard vocabularies
- ◆ Provide clinically useful subsets of large terminologies NLM Track - Fri. 3:15 pm
- ◆ Create, disseminate, and update standard terminology value sets for data elements

NLM provides -

- ◆ Public access to:
 - Structured Product Labels for medications as released by the FDA (linked to standard RxNorm names and identifiers) in the **DailyMed** NLM Track 1:30 pm
 - Linkable quality health information for patients & families (English, Spanish, selected items in other languages) in **MedlinePlus**
 - “Standard” clinical trial registry and *summary* results data in **ClinicalTrials.gov**

You can help NLM -

- ◆ Identify what would be most useful to implementers
- ◆ Use the UMLS resources, clinical terminology standards, and links to NLM information in real EHR implementations
- ◆ Provide the feedback needed to make them fit – and *easier* - to use in real clinical settings

Thank you

Betsy.Humphreys@nih.hhs.gov
